What is skybriefing.com ?

skybriefing.com is the new integrated briefing solution for all airspace users (general aviation VFR/IFR, business aviation, dispatch etc.). The new web application for flight preparations provides the state-mandated services on Swiss aerodromes as well as the location independent services via internet. The appearance of skybriefing is now consistently, regardless of whether it is used from home or at a terminal at the airport.

skybriefing.com is the official integrated briefing solution for Switzerland, that has been approved by the Federal Office of Civil Aviation (FOCA). The services and information provided by skyguide and MeteoSwiss are also available location independent and worldwide via internet.

The new solution provides Web services interfaces that can be used by software and app developers. The interfaces provide access to NOTAM data from authoritative sources and schedule functions. Skyguide makes a contribution to the development of a market that addresses the broader needs of the general aviation and so in turn contributes to safety in aviation.

The key benefits at a glance

- Fast, efficient and easy use
- Complete flight preparation within few minutes
- Individual tailored SmartNOTAM³ information
- Efficient ATC flight plan filing and management
- IFR route proposals and validation (RAD, CDR compatibel)

Service Levels

skybriefing.com assures a high service quality and availability

Service contingency

Should the skybriefing.com service be temporarily suspended, service contingency is provided by our Helpdesk.

Service availability

Service hours:

24 hours a day, 365 days a year

Service uptime:

over 95%

Availability:

depending on individual internet service provider

Service maintenance

Planned maintenance:

The availability of the selfbriefing.com service may be restricted at times due to planned maintenance to the operating infrastructure. All preventive maintenance will be carried out at night during the working week. Such maintenance may result in the service being unavailable for periods of several hours. All planned system maintenance will be announced in advance on the entry page of skybriefing.com and via Email to every user registered.

Unplanned maintenance:

Should any unplanned maintenance be urgently required, this will be announced by Email wherever possible. In such cases every effort will be made to perform the maintenance at night.
